

News from the world of adhesives and sealants

- “Adhesives” magazine presents new products and solutions
- Striking examples of the innovative power of Evonik Industries
- Information all about the world of adhesives and sealants now available as an App

The second edition of Evonik’s “Adhesives” magazine was published in mid-April, offering insight into the world of the specialty chemical company’s adhesives and sealants. The focus of this issue is once again on solutions that contribute to energy-saving processes and final products that use resources efficiently. Products presented include a new generation of DEGALAN® heat-seal binders and DYNACOLL® Terra, a line of bio-based polyester polyols that reduce the CO₂ footprint of flame-retardant adhesives. In other news, Evonik has also expanded its collaboration with a distribution partner for synthetic gas-to-liquid hard waxes—and much more.

Evonik now offers more information from the world of adhesives in a multifunctional, interactive software application for mobile devices: the Evonik Adhesives App provides product information, news on a wide variety of applications, and background information for current and future markets—all presented in the form of engaging short texts and videos. Users can download brochures and technical literature as well. The App also announces trade shows and events, and users can transfer the dates directly to their calendars. Contact information for all Evonik contacts are all transferred directly to your mobile device along with the App. One particularly practical feature: all of this information is also available offline.

The new App is now available for download from evonik.com/coatings-adhesives-app and at the AppStores for iOS, Android and Blackberry 10.
